

DSC Wireless Keys and Personal Panic

Provide users with a sense of control over their security systems and the added confidence that comes with portable personal protection. These multipurpose wireless devices give users a means to arm/disarm their DSC security systems from a distance or call for help from anywhere inside the home. DSC is committed to reducing false alarms and has incorporated activation delays into its wireless keys that require users to press and hold a button for a period of time before its function is activated. A red LED indicator located on the devices flashes to indicate that a transmission has been sent to the security system. Built with reliable 433 MHz technology and powered by long-life lithium batteries, DSC wireless keys use the latest production techniques to incorporate practical features and benefits into a design that is sleek and user-friendly.

- ▶ Programmable function keys
- ▶ Integrated LED to indicate signal transmission
- ▶ Powered by long-life lithium batteries (included)
- ▶ Activation delays to reduce false alarms
- ▶ Water resistant
- ▶ Reliable 433 MHz technology

DSC Wireless Keys and Personal Panic

WS4938 1-Button Personal Panic

The WS4938 1-button personal panic provides users with an uncomplicated, portable means to call for help from anywhere inside the home. The device's large panic button is clearly defined to ensure trouble-free activation in times of emergency. The panic button incorporates a full two-second delay to help reduce false alarms and to ensure transmissions are sent to the security system only when intended.

The WS4938 is water resistant, includes a neck strap and a multifunction clip that can be permanently mounted to a convenient location or clipped to a belt. The WS4938 is a supervised unit that sends periodic transmissions to the receiver to indicate functionality and battery status. If a transmission fails to reach the receiver after a programmed length of time, a trouble is indicated at the control panel keypad.

WS4939 4-Button Wireless Key

Add wireless convenience and value to any DSC security system with the WS4939 4-button wireless key. The WS4939 can be used to arm/disarm security systems from a distance, be programmed to trigger garage door openers, turn on lights, open powered gates, or trigger panic alarms. A multifunction clip allows the wireless key to be clipped to a convenient location. The WS4939 is also offered with optional designer cases that are available in eight stylish colors.

WS4949 2-Button Wireless Key

The competitively priced WS4949 2-button wireless key features scratch-resistant buttons that when activated perform either away arming or disarming functions. To activate these functions, press and hold the appropriate button until the one-second activation delay expires. The WS4949 incorporates a three-second activation delay on its panic function to help reduce false alarms. To activate it, both buttons need to be pressed simultaneously.

WS4959 12-Channel, 5-Button Wireless Key

Ideal for large residential or small commercial applications, the WS4959 is capable of supporting 12 programmable security and home automation functions. The WS4959 features four scratch-resistant buttons and a center button that allows users to toggle between three security modes. An integrated tri-color (red, green and amber) LED provides visual verification, signifying to users what mode they are engaged in and that a transmission has been sent to the security system. The WS4959 includes a multifunction clip and is capable of independently controlling up to three partitions.
